

SCE4000A-1

SANY Crawler Crane

400Tons Lifting Capacity

Quality Changes the World

Max. lifting moment: $333 \times 16 = 5,328 \text{t}\cdot\text{m}$

Longest boom: 84m

Longest boom+luffing jib: 84m+81m

The parameters, pictures and standard/optional equipment are only for reference in this brochure, the actual machine is based on the effective price list and contract.

400TONS LIFTING CAPACITY

QUALITY CHANGES THE WORLD

Main Characteristics

- Page 04 Product Specification
- Page 07 Safety Devices

Product Specification

Cab

- Appearance: The industrial modeling of the cab is designed by Porsche. It has a smooth, elegant and novel appearance, with brand identification, which is a significant breakthrough when compared with traditional engineering machinery. The cab is fitted with sliding door structure, which is suitable for the crawler crane and convenient for the operator. It is adopted with fully-sealed steel frame structure, with a large area of high strength toughened glass installed on the front, side and top, more light-transmitting. The interior space of the cab is spacious and bright, with a broader sight view.
- The suspended seat is shock and noise absorbing, and multi-mode and multi-stage adjustable, thus providing most comfortable driving experience. The famous USA RedDot air conditioner is adopted, with reasonable air outlet and efficient cooling. It takes no more than 20 min to cool the cab from 55°C to 27.5°C. The left and right armrest boxes and auxiliary control boxes are equipped with control handles, control buttons, ignition locks and other components. The seats, control handles and control buttons are arranged according to ergonomic design, fully considering the driver's operation demands and habits. The control box can be adjusted, with the seat, to the most desirable position, bringing more comfortable operation. The cab can tilt up to 25° according to the work demands, and can also rotate to the front part of the rotating bed for the convenience of transport.

Engine

- Cummins X12-C400 Stage V.
- Rated power: 298kW.
- Rated speed: 2,100rpm.
- Max. output torque: 2,169N·m.
- Speed at maximum output torque: 1,400rpm.

Main and Auxiliary Load Hoisting Mechanism

- A variable hydraulic motor drives the planetary gear reducer to control the load lifting and lowering of main and aux. hoist winches. A good inching performance is provided. The high-speed mode can realize main and aux. load lifting faster.
- Variable hydraulic motor can realize max. winch speed through displacement adjustment based on electricity flow.
- High-quality spin-resistance wire rope to make sure high safety and longer service life.
- Fold-line machined drum provides high precision and good reliability, making sure the wire rope won't get messy.
- The wire rope lug adopted to make wire rope assembly easier and faster.

Main load hoist mechanism	Drum diameter	626mm
	Rope speed on the outermost work layer	0~140m/min
	Steel rope diameter	26mm
	Steel rope length of main load hoist	900m
Aux. load hoist mechanism	Drum diameter	626mm
	Rope speed on the outermost work layer	0~140m/min
	Steel rope diameter	26mm
	Steel rope length of aux. load hoist	900m
	Rated tension of single rope	15t

Boom/Jib/Hoist Mechanism

- Including: luffing mechanisms of the boom, jib and superlift;
- Drums with fold-line grooves are adopted for all luffing devices. Hydraulic motor drives the planetary gear reducer to realize a number of compound functions and good inching performance.

Boom Luffing mechanism	Drum diameter	641mm
	Rope speed on the outermost work layer	(0~65)×2m/min
	Steel rope diameter	26mm
	Steel rope length of boom hoist	550m
Jib luffing mechanism	Drum diameter	641mm
	Rope speed on the outermost work layer	0~100m/min
	Steel rope diameter	26mm
	Steel rope length of jib luffing	660m
Superlift mast luffing	Drum diameter	641mm
	Rope speed on the outermost work layer	0~100m/min
	Steel rope diameter	26mm
	Steel rope length of superlift luffing	860m

Product Specification

Slewing Mechanism

- The slewing hydraulic system adopts double motor to drive the spur gear through the planetary gear box, which can realize 360° rotation, slewing speed of 0~1.4rpm, stepless speed regulation, no backlash at starting or stopping, stable operation and free slipping function at neutral position.
- Slewing ring: It is adopted with three-row roller type slewing bearing with external gears.

Carbody

- The hydraulic cylinder drives power pin to be connected with track frame to facilitate the assembly and disassembly. Frame structures are welded by high-strength steel. Larger chassis design greatly improves the stability of the crane. The self-assembled carbody counterweight is 40t, with 20t at both front and the rear.

Track Assembly

- Track frame: each track frame is equipped with an independent travel driving device. A hydraulic travel motor drives the planetary gear reducer and realizes independent traveling through the transmission of driving wheel. The travel system is configured with high and low speeds: sufficient traction is provided in low speed to realize travel with 100% load, the high speed can provide higher speed to improve the transit efficiency. The traveling drive can also realize stepless speed change.
- Track shoe: It is made of materials with high strength and high wear resistance through advanced casting process. After being installed on the equipment, its tension can be adjusted through the hydraulic jack, and the shim position can be adjusted to achieve the ideal tension.

Counterweight

- Counterweight include carbody counterweight , rear counterweight, superlift counterweight, and the details are listed below:

Name	Quantity	Length (m)	Width (m)	Height (m)	Unit Weight (t)
Carbody Counterweight	4	5.80	1.70	0.33	10
Rear Counterweight(10t)	12	2.85	2.40	0.49	10
Rear Counterweight Tray	2	3.20	2.83	1.80	15
Superlift Counterweight (10t)	20	2.85	2.40	0.49	10
Superlift Counterweight Tray	1	9.95	2.70	2.20	9

Operation equipment

- High-strength steel tubes and plates are adopted.

Boom

- The boom is a spatial lattice structure of welded tubes with equal section areas of inserts and tapered sections for two ends. The boom top and root are strengthened with steel plates, which is easier for load transfer.
- The boom length ranges from the that of basic boom 24m to max. length 84m.
- Composition: boom base 12m×1, tapered insert 10.5m×1, connecting tip (boom tip) 1.5m×1, insert section 6m×2, and insert section 12m×4.
- The extension jib shall be installed on the boom top.

Short Heavy Jib(for wind energy and shield lifting)

- The short heavy jib is a spatial lattice structure of welded tubes with equal section areas of inserts and tapered sections for two ends. The boom top and root are strengthened with steel plates, which is easier for load transfer. The jib is 9m long and can be used for both wind energy and shield lifting.
- Composition: Jib base 4.5m×1, Jib top 4.5m×1.

Product Specification

Luffing Jib

- The jib is a spatial lattice structure of welded tubes with equal section areas of inserts and tapered sections for two ends. The boom top and root are strengthened with steel plates, which is easier for load transfer.
- The length of the luffing jib ranges from 21m to 81m, increased by every 6m.
- Composition: jib base 4.5m×1, jib insert 6m×2, 12m jib insert A×1, 12m jib insert B×4, jib top 4.5m×1.
- The extension jib shall be installed on the luffing jib top.

Superlift Device

- The superlift mast is a spatial lattice structure of welded tubes with equal section areas of inserts and tapered sections for two ends. The boom top and root are strengthened with steel plates, which are easier for load transfer.
- The superlift mast is 30m long.
- Composition: mast base 12m×1, insert section 6m×1, and mast top 12m×1.

Hook

- 5 kinds of hooks are available, and specific parameters are as follows:

Name of Hook	Max. Lifting Capacity	Quantity	Pulleys	Unit Weight
400t hook	400t	1	2×9	10.5t
260t hook	260t	1	9	4.8t
160t hook	160t	1	5	3.8t
50t hook	50t	1	1	1.7t
16t ball hook	16t	1	-	0.9t

- The hook height limit:

Hook	Length (m)
400t hook	7.6
260t hook	6.4
160t hook	6.2
50t hook	5.6

Hook	Length (m)
16t hook	4.6

Hydraulic System

- The whole hydraulic system includes that of hoisting, traveling, slewing, luffing, servo, back-stop, cooling system, and auxiliary hydraulic system. Major hydraulic components are of famous brand.
- Features: lifting, traveling, luffing, and slewing hydraulic systems are applied with open circuits, which has advantages such as energy saving, high efficiency, quick response, low heat generation and long service life.
- Electrically-controlled proportional control components are adopted for the servo system to realize precise and intelligent control.
- The back-stop hydraulic system adopts balance valve of external control and unloading, and it is mounted on the cylinder to make sure it is safe and reliable.
- The cooling hydraulic system is featured with large heat exchange power and good cooling effect.

Operating Weight

- The operating weight is about 340t, including the upperworks, lowerworks, rear counterweight of basic machine, carbody counterweight, 24m basic boom and 400t hook.

Ground Pressure

- The average ground pressure of machine with basic boom is 0.167MPa.

Gradeability

- The gradeability of machine with basic boom is 15%.

Safety Devices

Load Moment Indicator

- The proprietary load moment indicator independently developed by Sany is adopted, which forms a network with other controllers through CAN bus line, so as to realize safe and reliable control. The load moment indicator can automatically detect the hoisting weight of the crane and the angle of the boom, and display the rated load capacity, actual load, working radius, and the allowable height of the hook.
- The load moment indicator system consists of a large-screen color display, a host computer, angle sensors, tension sensors, pressure sensors and other components.

Over-hoist Protection of the Main and Auxiliary Hooks

- It is used to prevent the over-hoist of the hook. When the lifting hook is raised to a certain height, the limit switch will start working, and hook will be automatically cut off from moving up by the control system. Meanwhile, the display and the buzzer will give alarms. At this moment, only hook lowering is allowed to prevent over-hoist action.

Over-release Protection Device of the Main and Auxiliary Hook

- It is used to prevent the wire rope over-release. When the wire rope is released to the last three wraps, the limit switch will start working, and the releasing of rope will be automatically stopped by the control system. Meanwhile, the display and the buzzer will give alarms. At this moment, only rope retraction is allowed to prevent over release action.

Assembly/Work Mode Switchover

- In Assembly Mode, some of the safety devices cannot function properly, such as jib limit, boom angle limit in LML, and overload, so as to facilitate the crane assembly.
- In Work Mode, all safety devices can function properly.

Boom Angle Limit

- When the elevation angle of the boom exceeds 85° or jib angle exceeds 75° , corresponding limit switch will be triggered, and the control system will automatically cut off the boom hoisting. Meanwhile, the display and the buzzer will give alarm. At this moment, boom/jib luffing winch won't hoist but it can still lower down.
- When the boom down angle is less than 30° or jib down angle is less than 15°, the control system will automatically cut off the boom/jib from further lowering. Meanwhile, the display and the buzzer will give alarms. At this moment, boom/jib luffing winch won't be able to lower. This protection is automatically controlled by Load Moment Limiter.

Back-stop Device

- The boom and the superlift mast are respectively equipped with a pair of back-stop cylinders. The high pressure of the cylinder shall be overcome when the boom tilts backwards, and high pressure oil will be supplemented automatically when the boom swings forwards to increase the tension and prevent the boom vibration and shaking back.
- The jib rear mast is equipped with a pair of back-stop cylinders, while the jib front mast is equipped with a pair of pneumatic cylinders to prevent the mast from the backward inclination and tension of the jib luffing wire rope.

Brake of Hoisting Mechanism

- All hoisting brakes are spring loaded normally closed disc brakes, which are featured with large braking force, maintenance-free, safe and reliable use, and long service life.

CCTV Monitoring System

- It can be used to monitor the winding conditions of wire ropes of each hoisting mechanism, the conditions of superlift weight, and conditions around the equipment.

Fault Auto-Diagnosis System

- Faults can be conveniently eliminated based on the fault code.

Black Box

- It is able to record the operation data and machine movement, and analyze the remaining running conditions and service life of machine based on the actual performance.

Pharos

- It is mounted on the top of the boom/jib and alerts in air during night.

Anemometer

- It is mounted on the top of the boom/jib to monitor the wind speed in real time and display relative data on the monitor.

Safety Devices

Electronic Level Indicator

- It displays the tilting angle of the crane on the monitor in real time and protects the safe operation of the crane.

Lightning Protection Device

- It includes the lightning protection device and the surge protection device, which can effectively protect the electric system elements and workers from lightning.

Hook Latch

- The lifting hook is installed with a baffle plate to prevent wire rope from falling off.

Swing and Traveling Alarm

- During swing and traveling, the alarm horn will be blown per certain frequency to alert the personnel around the crane. The horn can be shut off through the display.

Seat interlock

- The operation will be locked by pulling up the function locking lever on the right side of the seat inside the driver's cab or when the operator left the seat, after which no operating handles will be working so that improper operation caused by the body collision when getting on and off the crane can be avoided.

Regulation of Engine Power Ultimate Load and Stalling Protection

- The controller can monitor the engine power so as to prevent stalling.

Engine Status Monitoring

- It can show the engine coolant temperature, fuel volume, total working hours, engine oil pressure, engine speed, battery and voltage.

Remote Monitoring System

- It monitors and analyzes the operation data so as to realize remote diagnosis of faults and timely solution.

Emergent Stop

- In a sudden loss of control, press the emergent stop, all actions such as hoisting, luffing, swinging and traveling brake and engine stops.

Major Performance & Specifications

Major Performance & Specifications of SCE4000A-1		
Performance Indicators	Unit	Parameter
Max. rated lifting capacity	t	400
Max. rated lifting moment	t·m	2695=385×7
Max. rated lifting moment (with superlift)	t·m	5328=333×16
Boom length (H)	m	24~84
Boom length (HDB with superlift)	m	36~84
Length of mixed boom (HJ)	m	45~99
Length of mixed boom (HJDB with superlift)	m	69~123
Length of luffing jib (LJ)	m	21~75
Length of luffing jib (LJDB with superlift)	m	21~81
Combination of longest boom+luffing jib (LJDB Configuration)	m	84+81
Heavy boom for wind energy	m	9
Boom + Fixed jib (FJh Configuration)	m	24+9
Boom+Fixed jib(FJhDB Configuration)	m	36+9
Boom + Mixed boom + Fixed jib (HJFJ Wind energy)	m	90+9
Angle of boom hoisting	°	30~85
Angle of jib luffing	°	15~75
Max. speed of single rope of the main load hoist	m/min	0~140
Max. speed of single rope of the aux. load hoist	m/min	0~140
Max. speed of single rope of the boom hoisting	m/min	(0~65)×2
Max. speed of single rope of the jib luffing	m/min	0~100
Max. speed of single rope of the superlift luffing	m/min	0~100
Slewing speed (no load)	r/min	0~1.4
Travel speed	km/h	0~1(high)/0~0.4(low)
Gradeability (with basic boom, driver's cab backwards)	%	15
Rated output power of the engine	kW/rpm	298/2100
Average ground pressure of the track (basic boom, 150t rear counterweight, 40t carbody weight, and 400t hook)	MPa	0.167
Max. transport dimension of single piece (L × W × H)	mm	12000×3000×3300
Max. transport weight of single piece	t	41.3

Boom combination

Configuration	Boom Combination	Boom Length
H	Boom	24m~84m
HDB	Boom+ superlift mast+ superlift counterweight	36m~84m
HJ	Mixed boom	45m~99m
HJDB	Mixed boom+ superlift mast+ superlift counterweight	69m~123m

Note: The schematics above are reference for loading only.

Boom combination

Configuration	Boom Combination	Boom Length
HJFJ	Mixed boom+ fixed jib	(72m~90m)+9m
LJ	Boom+luffing jib	(36m~66m)+(21m~75m)
LJDB	Boom + luffing jib +superlift mast+ superlift counterweight	(36m~84m)+(21m~81m)

Note: The schematics above are reference for loading only.

Boom combination

FJh Configuration

FJhDB Configuration

Configuration	Boom Combination	Boom Length
FJh	Boom+short heavy fixed jib	24m+9m
FJhDB	Boom+short heavy fixed jib + superlift mast+ superlift counterweight	36m+9m

Note: The schematics above are reference for loading only.

Boom Combination in H

Note: The 24m basic boom consists of 12m boom base, 10.5m tapered insert and 1.5m boom tip.

**H Configuration
(24m~84m)**

Working Radius in H

Unit:t

Load Chart of H

Note:

- 1.The rated load in the load chart is calculated complying with EN13000;
- 2.The working radius is the horizontal distance from the load center to the swing center;
- 3.The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart;
- 4.The load value is calculated when the object is hung freely,without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgment and decreasing the load and lowering speed;
- 5.All ratings are calculated when the machine is parking on firm and level ground with less than 1% gradient.

Boom Combination in HJFJ

	Boom base
	Boom insert
	Boom insert
	Boom insert
	Tapered insert
	Boom tip
	Jib base
	Jib top
	Jib insert
	Jib insert
	Jib insert

Note:

- 1.The 12m boom base and 10.5m tapered insert are must. For jib combination, the 4.5m jib base, 6m luffing jib insert A, and 4.5m jib top are must.
- 2.For combinations marked with " ★ ", the mid-point suspension cable must be used, otherwise, the boom system may break.

**HJFJ onfiguration
(72m~90m)+9m**

Working Radius in HJFJ

Unit:t

Load Chart of HJFJ**Note:**

- 1.The rated load in the load chart is calculated complying with EN13000;
- 2.The working radius is the horizontal distance from the load center to the swing center;
- 3.The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart;
- 4.The load value is calculated when the object is hung freely,without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgment and decreasing the load and lowering speed;
- 5.All ratings are calculated when the machine is parking on firm and level ground with less than 1% gradient;
- 6.See the Operation Manual for the complete load charts of HJFJ Configuration.

	Jib insert

**LJDB Configuration
(36m~84m)+(21m~81m)**

Note: The 36m~84m boom combination is the same as that of the H Configuration.
For jib combination, the 4.5m jib base, 6m luffing jib insert A, and 4.5m jib top are must.

Working Radius in LJDB

Load Chart of LJDB

Note:

- 1.The rated load in the load chart is calculated complying with EN13000;
- 2.The working radius is the horizontal distance from the load center to the swing center;
- 3.The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart;
- 4.The load value is calculated when the object is hung freely,without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgment and decreasing the load and lowering speed;
- 5.All ratings are calculated when the machine is parking on firm and level ground with less than 1% gradient;
- 6.See the Operation Manual for the complete load charts of LJDB Configuration.

Load Chart of LJDB

Note:

- 1.The rated load in the load chart is calculated complying with EN13000;
- 2.The working radius is the horizontal distance from the load center to the swing center;
- 3.The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart;
- 4.The load value is calculated when the object is hung freely,without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgment and decreasing the load and lowering speed;
- 5.All ratings are calculated when the machine is parking on firm and level ground with less than 1% gradient;
- 6.See the Operation Manual for the complete load charts of LJDB Configuration.
